

the need for, and scope of, a portfolio of agile practices is important.

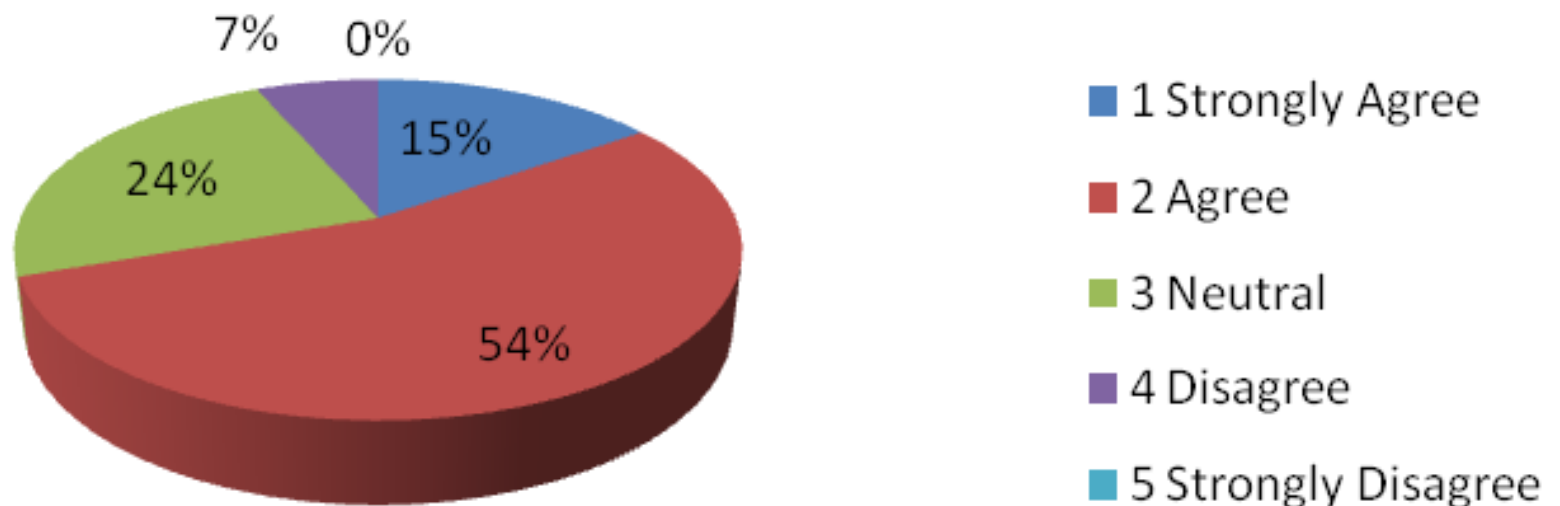

There are different objective and perceived effects of various practices under varying situations

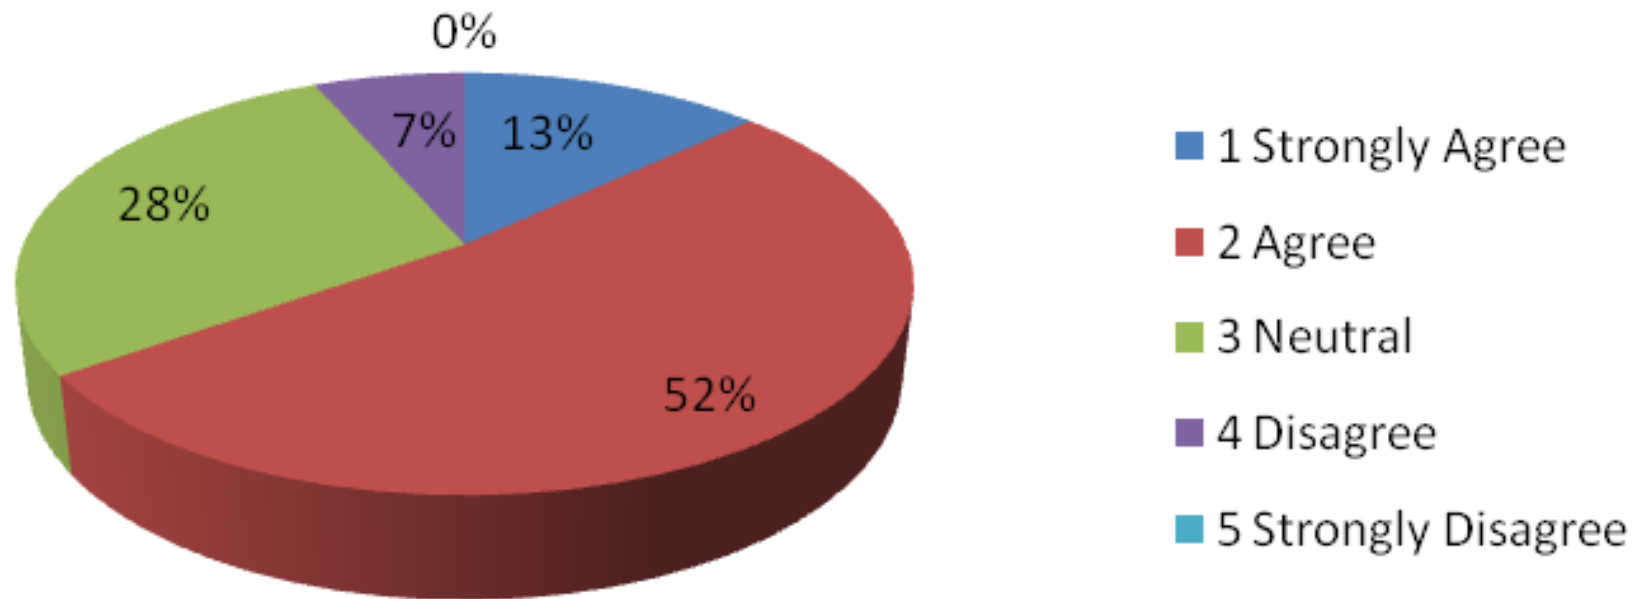

Agiel has been viewed as a messy, and rigor adverse

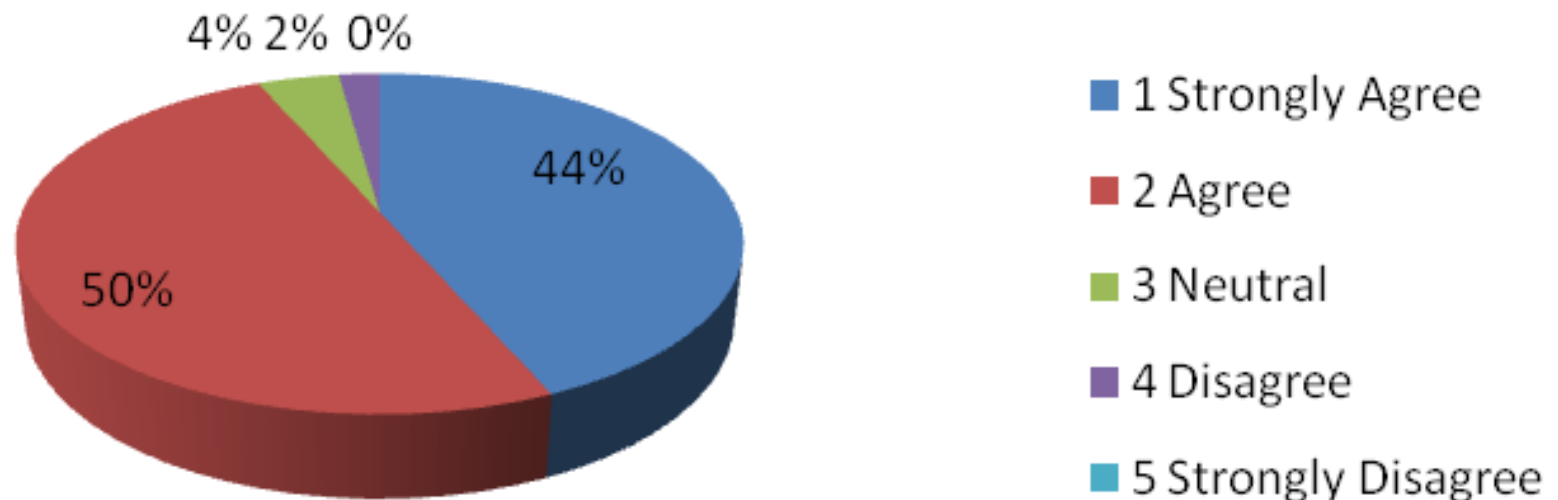

Many Agile practices are already accepted in the formal/traditional development methodologies and used in Agile variations

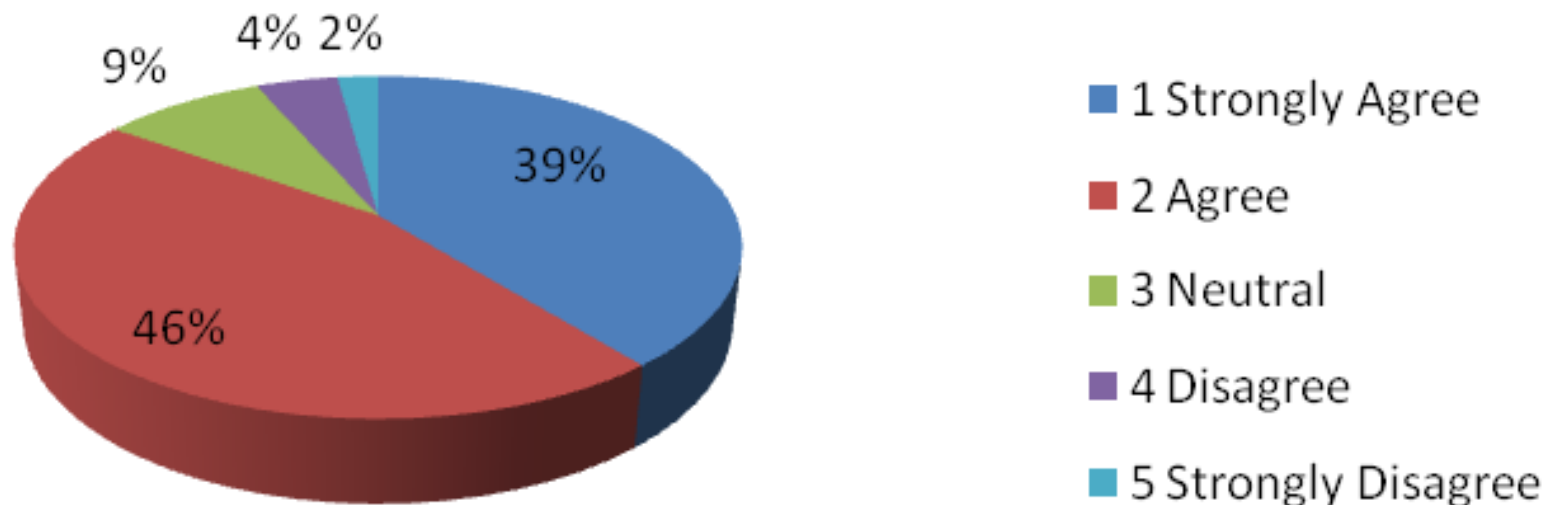

Practices are uniquely assembled and are both rigorously (and loosely) applied

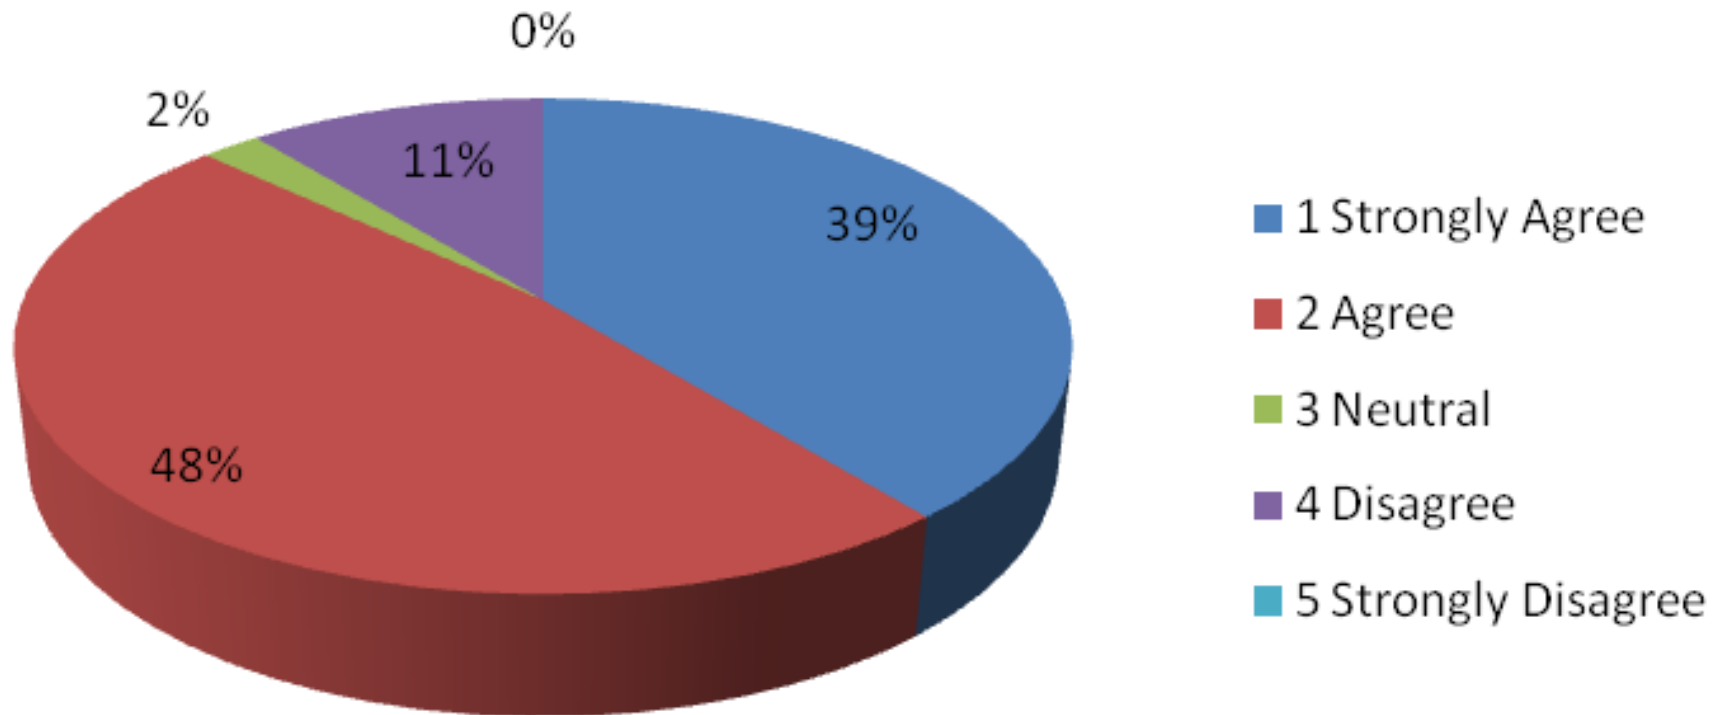

Practices have attributes that make them more or less effective under varying project conditions (e.g., stage of development, scale, expertise,...

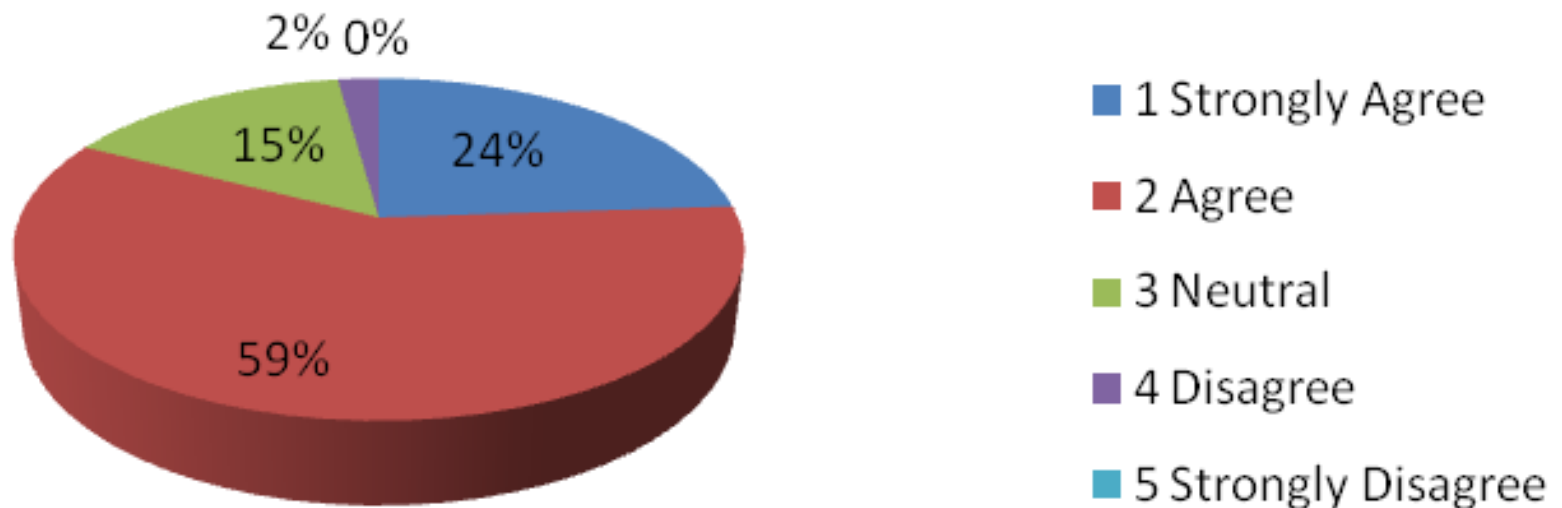

Practices have attributes that make them more or less effective under varying project life-cycle steps or stages (e.g., requirements, analysis,...

Best practices do not always result in uniform project success.

It would be useful for the development “field” and practitioners to have broader and stronger agreement on the...

More careful development of the practices and improved understanding about how/when the practices are combined (structured)...
